## **Ad plugin to your construct 2 program file:**

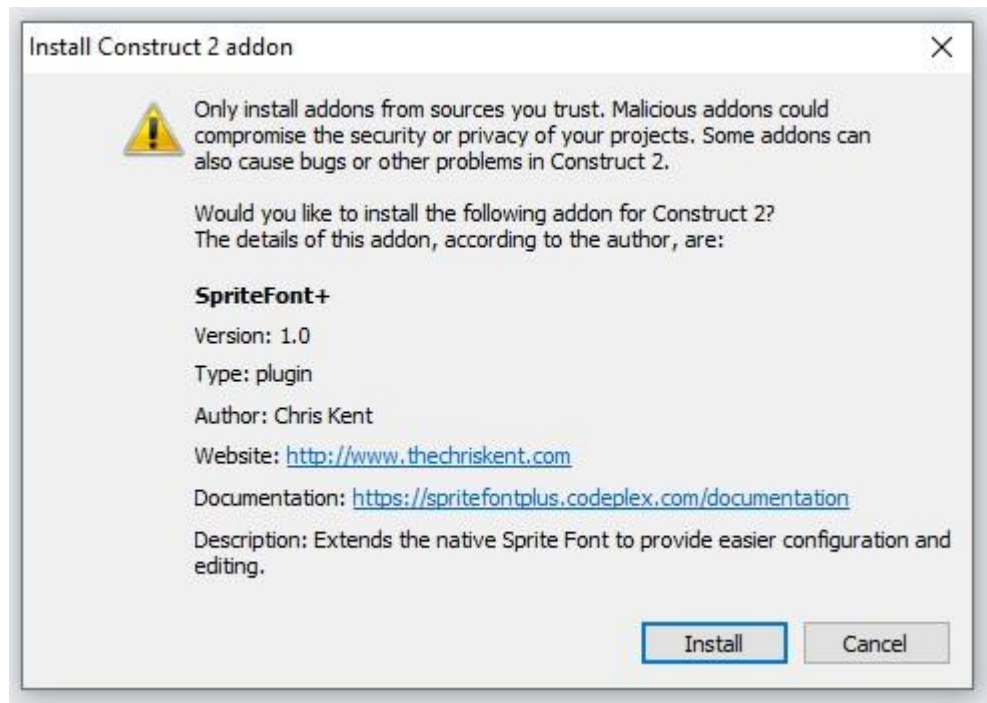

Before Opening the project you must Ad “lunarray.litetween” behavior to your construct 2 program file and restart the program.

Extract to:

C:\Program Files\Construct 2\exporters\html5\behaviors

How to Open Project:

Add “spritefont plus plugin” if you need it. Drag and drop it on construct 2 and click install.

## **Ad plugin to your construct 3 program file:**

Menu → view → Addon manager

## **Open the Project:**

- Run the Construct 2, go to FILE / OPEN.

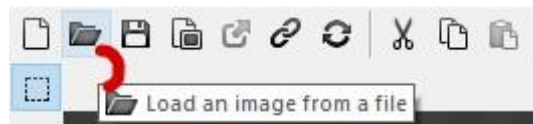

➤ Select “ZigZag” file

➤ At the top of the desktop we have the "tabs" of the project.

## **How to reskin the app:**

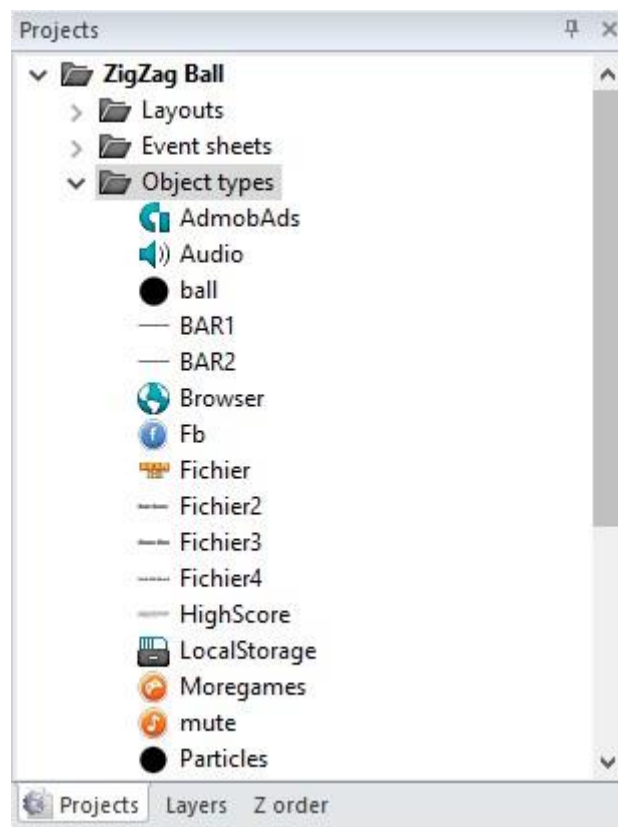

Double click on the image, then click “Load an image from a file”

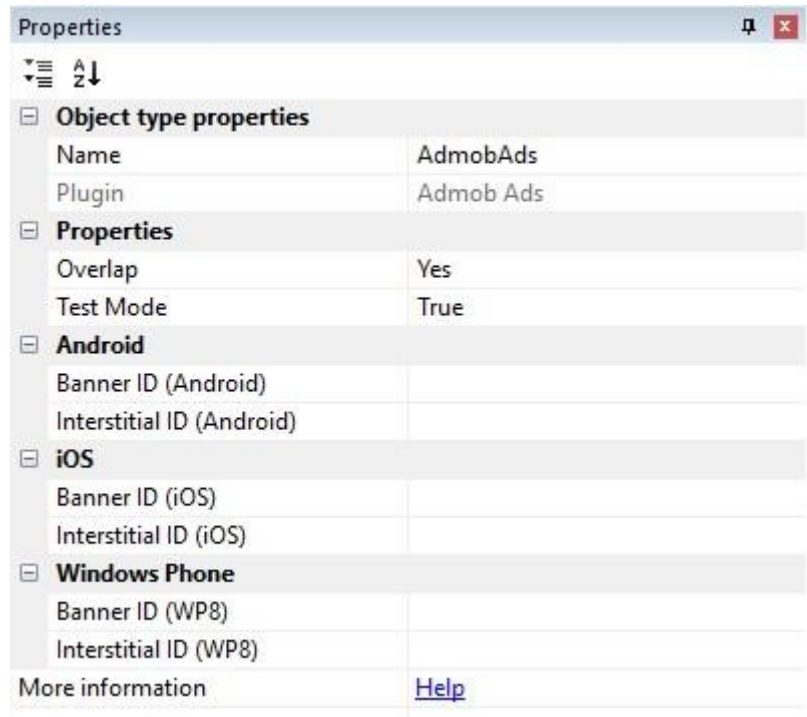

## **AdMob:**

- If you want to export your project to mobile (Android or IOS)

Go to projects / AdmobAds

On the left side, we have AdMob properties, Ad your Banner and Interstitial ID, change Test Mode to False.

You can change the setting from “AdMob” event sheet.

## **Export Files:**

**If you don't have construct 2 or construct 3, you can use export files to build APK.**
